## AMENDMENTS TO THE CLAIMS

- 1-14. (cancelled)
- (previously presented) A networking device comprising: 15. a first packet processor comprising:

an input interface having a port to accept incoming packets;

an input memory coupled to said input interface for temporarily storing said packets in a queue arranged by a receiving order;

a second packet processor comprising:

an output interface having a port to send said packets out of said networking device;

an output memory coupled to said output interface for temporarily storing said packets;

a switching fabric coupled to said first packet processor and said second packet processor for conveying information between said first packet processor and said second packet processor; and

said first packet processor also for sending a memory request corresponding to a first packet which is not at a head of said queue to said second packet processor, said first packet processor also for receiving a memory reply from said second packet processor corresponding to said memory request for said first packet prior to forwarding a second packet that is ahead of said first packet in said queue.

- 16. (cancelled)
- (previously presented) The networking device as described in Claim 15 17. wherein said first packet processor is also for sending a third packet to said second packet processor, wherein said third packet is at the head of said queue.

Examiner: Wong, Warner Serial No.: 10/091,775 Art Unit: 2668 - 2 -

- (previously presented) The networking device as described in Claim 17 18. wherein said second packet processor is also for receiving said first packet, said second packet and said third packet.
- (Previously Presented) The networking device as described in Claim 15 19. wherein said second packet processor is also for sending said first packet out of said networking device.
- (original) The networking device as described in Claim 15 further 20. comprising a plurality of packet processors in addition to said first and said second packet processors coupled to said switching fabric.
- (Previously Presented) The networking device as described in Claim 15 21. wherein said memory request comprises a first portion to indicate that said first packet is not at a head of said queue.
- 22. (Previously Presented) The networking device as described in Claim 15 wherein said first packet is an internet protocol packet.

23-37. (cancelled)
